THE

GARDENERS' CHRONICLE.

A Weekly Illustrated Journal

OF

HORTICULTURE AND ALLIED SUBJECTS.

VOL. X.—NEW SERIES.

JULY TO DECEMBER, 1878.

LONDON:

41, WELLINGTON STREET, COVENT GARDEN, W.C.

1878.
new Garden Plants.

Cyclamen absolitum, Mig.*

A species resembling C. cineraria, the specimen before us has a stout, glabrous, oblong stock, 40 inches in circumference, marked with circular, dark green, almost as in the root of Buxus Glaucescens. The leaves measure about 30 inches by 3 inches, are oblong in form, flat or slightly revolute at the edges, and pinheadly divided into about sixty-five pairs and one terminal segment. The flower clusters are about 4 inches long, and glandularly pedicelled. The calyx is tubular, 1.5 inches long, and bluish in color. The tube is racemose, with the base of the flower on the sides. The sepals are about 1 inch in length, and gradually diminish in size towards the apex, and towards the base; all are linear-lanceolate, acuminate at the tip, and somewhat curved. The petals are about 3 inches in length, and were not seen in bloom. The flowers are white, with three lateral lobes, and two white, purple petals. The flowers are small, with three lateral petals, and two white, purple petals. The flowers are small, with three lateral petals, and two white, purple petals.

* Enchanted acanthus, J. W. Nov. 1874.

This is a very distinct looking species, seemingly a Chrysanthemum, and is distinctly known. It was introduced to Mr. Balf's nursery from the California Botanic Garden, and is now in cultivation. Its flowers are lavender-colored, with a slight tinge of purple. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation. The flowers are large, with a slight tinge of purple. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation.

* Zone acanthus, Migo. A. B. C. P. Nov. 1874.

This is a very distinct looking species, seemingly a Chrysanthemum, and is distinctly known. It was introduced to Mr. Balf's nursery from the California Botanic Garden, and is now in cultivation. Its flowers are lavender-colored, with a slight tinge of purple. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation. The flowers are large, with a slight tinge of purple. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation.

* Cyclamens, C. n. 1875.

This is in the way of Chrysanthemum eximium and C. maculatum, with flowers more like those of the former than of the latter. The flowers are white, with a few purple petals. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation. The flowers are large, with a slight tinge of purple. The plant is hardy, and grows well in the garden. It is a handsome border plant, and is well worthy of cultivation.
